PROJECTS

AI Resume Analyser | *MERN, Groq LLM, Firebase* | [GitHub](#) | [Live](#)

Feb 2026

- Designed a **multi-stage LLM inference pipeline** (Groq/LLaMA-3.3-70b) returning deterministic, schema-validated JSON for **match scoring** and **skill-gap analysis**, enabling near-real-time **AI-driven screening**.
- Developed **fault-tolerant RESTful services** with automated retry/backoff logic and parallel request handling; integrated **Firebase OAuth, Multer, and Cloudinary** to support simultaneous multi-user document uploads.
- Provisioned and deployed the complete application on **Vercel/Render/MongoDB Atlas** with environment-based configuration and an admin dashboard tracking **50+ live resume submissions** and inference logs.

Eventora – Event Booking Platform | *React, Node.js, MongoDB, Razorpay, JWT* | [GitHub](#) | [Live](#)

May 2026

- Created a **full-stack event booking platform** with layered **OTP verification** via Nodemailer and **stateless JWT-based authentication** enforced through permission-scoped, route-level authorization middleware.
- Secured payment transactions via **Razorpay** using **HMAC-SHA256 signature validation** and **MongoDB order-ID deduplication**, closing off **replay-attack vectors** and auto-confirming bookings.
- Optimized **MongoDB indexing** and query execution, reducing booking-retrieval latency while sustaining stable performance under **concurrent traffic**.

High-Performance File Compressor | *C++, STL, Huffman Coding* | [GitHub](#)

Dec 2025

- Delivered a lossless data compression engine in **C++** using **Huffman Coding** and a min-heap priority queue, cutting file size by **40%** through entropy-optimal encoding at $O(n \log n)$ **time complexity**.
- Refined tree-construction and bit-level encoding routines to improve execution efficiency while validating **memory safety** across extensive edge-case and adversarial testing.
